

Course Report AG2110 2022

A few changes were made to the course this year given feedback from students the following year. The number of seminar papers that students were required to write was reduced from 2 papers to 1 paper. The accompanying change to the course syllabus was made and approved. In addition, a seminar topic was changed. The previous seminar topic on “The Promise and Limitations of CEDAW” was changed to “Norm Diffusion and the Local Adoption of Global Standards”. The new topic created a better opportunity for students to engage with the literature analytically and interrogate the theory of norm diffusion/translation. Finally, Kristen Kao was given an additional 2 hour lecture to expand the section of the course dealing with the challenge of migration.

40 students responded to the student evaluations, approx. 75% of those who took the course. All aspects of the course were rated rather good or very good by the majority of students. Thus, overall, the course was rated favorably by the students. In the student comments, a recurrent suggestion was to add a section of the course on climate and environmental issues. It is difficult to do this considering the expertise of lecturers that are available. Students also mentioned that the take home exam was difficult in terms of the questions that were offered and the time allotted for completion of the exam. The exam was revised in 2021 based on student feedback. I will look again at this feedback in planning the course for fall 2023 and consider another revision.

Below is a summary of how the course was rated based on responses to each of the questions in the course.
