

Course report – Free standing courses and courses within *Europaprogrammet* (EP), Master's Programme European Studies – Social science track (MAES) and Master's Programme in European Studies – Humanities track (HMAES).

Course name, course code, programme, and semester European Environment and Energy EU2210, HT24	Course instructors' name och e-mail Niklas Harring, niklas.harring@pol.gu.se
Throughput and achievement	We had 21 registered students, with 19 students actively following the course. Of these, 17 have a final grade, of these, 6 have VG and 11 have G.
Impressions of course execution of the course: general and specific	EU2210 is generally a well-functioning course, receiving a mix of positive and negative feedback from students. Many students appreciate the active engagement required during seminars and the opportunity to develop their own projects. However, some students feel there is a mismatch between how the course content is presented and what is actually taught. They note that there is too much independent work and that the course book, for example, does not align well with the lectures. Additionally, students find assignments 3 (formulating a research question) and 4 (writing a master's thesis proposal) to be somewhat redundant, as the tasks are perceived as too similar. The integration of AI tools also presents challenges, particularly in ensuring that assignments and general guidelines on AI usage align with learning objectives and create a fair environment for all students.
Impressions of the students' general views on the course	According to the written evaluation (completed by 12 respondents), one student rated the course as "very good," while seven described it as "rather good." Additionally, three students considered it "neither good nor bad," and one rated it as "very bad." Overall, the course evaluation is slightly more positive compared to last year. During the oral evaluation, students also expressed a generally more positive sentiment. However, the written feedback highlighted some concerns, such as the disconnect between the lectures and assignments, and a perceived lack of coherence between the course description on the GU website and the actual course content. On a more positive note, one student remarked, "I feel that it's an underrated course which needs more attention and more advertisement!"
Impressions of the students' specific views on the course	Students expressed that they felt a lack of focus on theory and instruction on theoretical frameworks. While some found the literature relevant, others did not. Many students appreciated the emphasis on active participation during seminars, but they also noted that there were too few lectures, both on substantive topics and on designing research proposals. Additionally, they suggested that the instructions for assignments could be improved and highlighted a desire for more extensive written feedback.
Students' potential "Aha Experiences" during the course	The students say that giving presentations was a good training.
Students' and teachers' impressions of the CANVAS-page and other administrative functions	Some students expressed a desire for more detailed information about the presentations in the course guide. They also suggested that the teachers should coordinate better to ensure consistency in their use of Canvas, and that there should be alignment between the information provided in the course guide and on Canvas

Ideas about potential changes for the next time the course is taught	The teachers could consider revising one of the assignments, preferably assignment 3, to focus more on the role of theory in social science research, reducing overlap with assignment 4. The course coordinator and administrator should ensure that information provided across various platforms and forums accurately represents the course. Additionally, the Canvas page should be more organized and coherent, particularly in clarifying where students can upload their assignments. Furthermore, the integration of each theme's substance and the skills developed throughout the course could be improved.
Ideas for long-term and / or more extensive changes of the course	At the moment, there are no specific new ideas to implement. While it would certainly be beneficial to include more substantive lectures on European environment and energy politics, the current course budget makes this impossible. Additionally, the ongoing development of AI tools and their integration into academic settings will likely influence how this course is taught and assessed in the future.

* The Course reporting aims at responsiveness to the students' views, quality assurance of the business as well as subject and educational development. The report should have a forward-looking focus, reflecting the course instructor's visions, and be based on a compilation of impressions derived from the following material (where relevant): comments by students individually or in groups; reflections from teachers, administrators and student counsellor; and impressions from the students, i.e. results from meetings and course evaluation polls.
